 KeerthanaVaranasi

 KeerthanaVaranasi

 KeerthanaVaranasi

SUMMARY

Software Engineer with 2+ years of experience in designing, developing, and maintaining scalable backend applications and microservices using Node.js, TypeScript, GraphQL, and REST APIs. Experienced in building secure enterprise integrations, event-driven pipelines with Apache Kafka, and sub-10ms caching architectures with Redis supporting 350,000+ live users. Possesses a strong foundation in API design, debugging, data consistency, and performance optimization, with a commitment to delivering resilient, high-quality systems in collaborative engineering teams.

EXPERIENCE

Software Development Engineer - 1

07/2025 – Present

Dhan AI

- Developed high-scale platforms using Node.js, TypeScript supporting 350K+ live customers and major telecom operations.
- Developed bi-directional data synchronization mechanisms across enterprise CRM and ERP systems, ensuring strict referential integrity and zero record duplication.
- Integrated secure identity management and granular Role-Based Access Control (RBAC) to protect sensitive account and billing transactions.
- Enhanced customer-facing solutions by integrating secure, data-driven systems using Kafka, Dynamics 365, Salesforce CRM and Firebase Auth.
- Improved system performance and API responsiveness by 30%, enabling faster digital interactions and reduced support dependency.

Junior Software Engineer

07/2024 – 06/2025

Dhan AI

- Developed and maintained high-traffic REST and GraphQL API services supporting real-time account operations.
- Implemented multi-tier caching architectures with Redis to optimize database read performance and accelerate high-frequency queries to under 10ms.
- Participated actively in sprint planning, code reviews, and performance profiling to eliminate latency bottlenecks across services.
- Built background Kafka event producers to capture telemetry, track user lifecycle events, and trigger automated downstream actions.

Backend Developer Intern

01/2024 – 06/2024

Dhan AI

- Gained hands-on experience with backend technologies, contributing effectively to real-world customer platforms.
- Optimized backend performance and reliability by analyzing edge-case error scenarios and debugging latency bottlenecks.
- Collaborated in agile cross-functional engineering teams following modern Git workflows and automated testing.

SKILLS

Programming Languages TypeScript, JavaScript, Node.js, Python, Java, C, SQL	API and Web Development GraphQL, REST, Express.js, HTML, CSS
Database MongoDB, MySQL, PostgreSQL, Redis	Development Tools Kafka, Firebase, Kibana, Git, GitHub, GitLab, Postman

PROJECTS

Sales Order Orchestrator

Tech Stack: Node.js, TypeScript, Kafka, REST APIs, MongoDB

- Designed and developed scalable backend microservices using Node.js and TypeScript to consume real-time domain events via Apache Kafka and automate end-to-end order execution in Microsoft Dynamics 365.
- Implemented complex payload transformation and mapping pipelines to convert nested Salesforce domain models and commercial order structures into Dynamics OData REST API schemas.
- Engineered an asynchronous bi-directional sync loop to capture operational system identifiers and update upstream CRM records, ensuring cross-system referential integrity and preventing duplicate records.
- Collaborated closely with cross-functional engineering, CRM, and QA teams to troubleshoot production edge cases, and ensure seamless releases.

Customer Self-Service Portal

Tech Stack: Node.js, TypeScript, GraphQL, Redis, Kafka, Firebase Authentication, REST APIs

- Contributed to the development and maintenance of a customer-facing self-service platform supporting 350,000+ live residential users.
- Designed and developed scalable backend APIs using Node.js and TypeScript to support billing, payments, account management, and customer operations.
- Integrated Firebase Authentication with robust role-based access control (RBAC) to enforce secure authentication and authorization workflows.
- Leveraged Redis caching to improve application performance and reduce response times for frequently accessed data.
- Published customer activity events to Kafka, enabling downstream analytics and customer behavior tracking.
- Collaborated closely with cross-functional engineering teams to troubleshoot complex production issues and ensure maximum system reliability.

EDUCATION

Shri Vishnu Engineering College For Women <i>BTech in Information Technology</i>	2020 – 2024
Narayana Junior College <i>Intermediate</i>	2018 – 2020
DAV Public School <i>SSC</i>	2017 – 2018

ACHIEVEMENTS

- Bronze certified certificate by Smart Interviews on Data Structures and Algorithms.
- Secured 2nd place in Datathon conducted in my college.
